

WinTA PC CLOCK

- ▶ EEC Working Time Directive Compliant
- ▶ No clocking terminals required
- ▶ PC users can book in & out at their PC
- ▶ Automatic and definable Reports

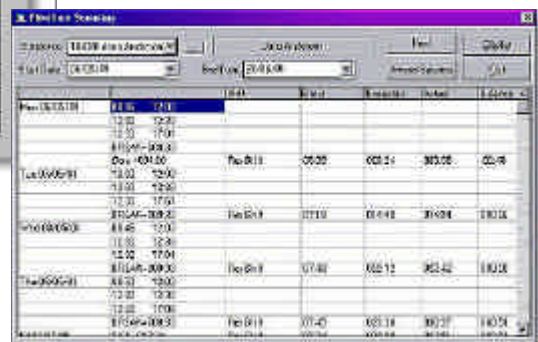

The **EEC Working Time Directive** applies to almost all companies and businesses. It requires them to produce employee time sheets (and manually do the necessary calculations) or introduce a clocking system. For many office based companies, this may be difficult to implement, or costly to introduce.

Tensor has produced **PC Clock**, a simple PC based booking system. It comprises an Input Screen to book "In" and "Out" and an Analysis Module that processes the bookings and do the calculations necessary for Time & Attendance and the Working Time Directive.

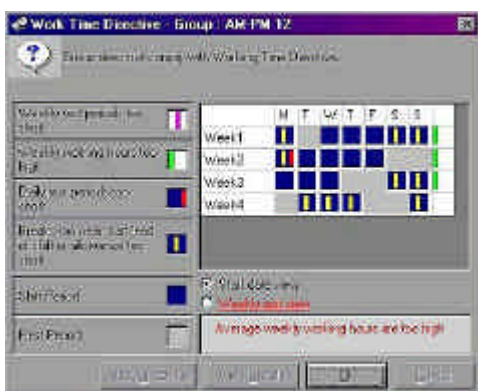

Where employees do not have their own PC, a 'shared' PC can be used to book and review attendance information. The PC Clock software is Multi-user so there are no "extra user licences" to worry about. You can run the Input Screen program on every PC in within the whole site at no extra cost!

At the core of PC Clock's Analysis Module is a reduced version of Tensor's acclaimed "WinTA" Time and Attendance software. Many of the WinTA features are included, such as the **Holiday/Absence Planners**. **Reports** showing bookings can be viewed and printed, allowing each employee to see, at any time, the data held for them.

You can create customised reports using the **Report Generator**. These can be printed automatically at chosen times of the day.

Working Time Directive

The Analysis Module incorporates specialised compliance checks & reports to conform with the Working Time Directive; including 48 hour week/night work checks, period average hours and daily/weekly rest compliance checks.

The cost of compliance? PC Clock software is only available from Tensor at a special price of:

£495.00 + V.A.T.

(Price includes PC Clock CD, a user manual, and UK postage).
